

"WHEN THEY SAW HOW EASY IT IS TO MAKE PERFECT COLOUR PRINTS, MY FRIENDS TURNED GREEN"

From the first time you use one of these Philips enlargers, you'll be stunned by the quality it gives you.

Not to mention the ease of use and flexibility.

Each is a high specification enlarger that gives professional results - but without professional prices.

The PCS 2000 Colour Enlarger

This is the unit that has brought superb colour within reach of the amateur photographer. It is complete for use up to 35mm and convertible to 2½" square, the enlarger has a built-in exposure timer and is voltage stabilized.

The revolutionary Tri-One exposure system mixes primary coloured light from three lamps. So to change the colour balance, all you do is adjust three colour dials.

No tricky juggling of filters. And with the unique positive, negative switch you don't need to think in reverse to make prints from transparencies.

The PCS 130 Enlarger

A comprehensive black and white enlarger which can easily be converted to colour when you need to.

Supplied for up to 35mm, with accessory condenser for up to 6" x 7" format. Plus full facilities for lensboard adjustments - and head swing for wall projection.

And there's a wide choice of accessories to help you get even more out of your photographs.

When you want to upgrade to colour

It's simple. Just fit a Philips Tri-One light source into the PCS 130 enlarger head.

And the accompanying PCS 150 Controller has a built-in timer, is voltage stabilized and has colour dials for a superb colour enlarging system.

This combination gives you plenty of versatility - not only for conventional printing and enlarging, but also for slide duplication, internegs, colour separations, posterisation and many more advanced creative techniques.

But the biggest surprise is yet to come: whichever Philips enlarger system you choose, it'll set you back no more than the price of a good SLR camera system.
